## Summary

## SPECIFICATIONS

Power Source:	12V DC Battery PV-BP80 Prog. Tuner Unit PV-A820 PV-A850 PV-A860 Plug-in AC Adaptor PV-A118	Output Level:	Video: VIDEO OUT Jack (RCA type) 1.0Vp-p, 75Ω unbalanced Audio: AUDIO OUT Jack (RCA type) -9dB, 600Ω unbalanced RF Modulated: Ch3/Ch4 switchable 72dBμ, (Open Voltage) 75Ω unbalanced
Power Consumption:	Approx. 10 watts (16W with Camera)	Video Horizontal	Resolution: Color: more than 230 lines B/W: more than 230 lines
Television System:	EIA Standard (525 lines, 60 fields) NTSC color signal	Audio Frequency	Response: SP mode: 100Hz ~ 8kHz (10dB down) LP mode: 100Hz ~ 6kHz SLP mode: 150Hz ~ 5kHz
Video Recording	System: 4 rotary heads, helical scanning system Luminance: FM azimuth recording Color signal: Converted subcarrier phase shift recording	Signal-to-Noise Ratio:	Video: SP mode: better than 41dB LP mode: better than 41dB SLP mode: better than 41dB (Rohde & Schwarz noise meter) Audio: SP mode: better than 42dB LP mode: better than 40dB SLP mode: better than 40dB
Audio Track:	2 track	Operation	Temperature: 32°F-104°F (0°C-40°C)
Tape Format:	Tape width 1/2" (12.7mm), high density tape	Operating Humidity:	10%-75%
Tape Speed:	SP mode: 1-5/16 i.p.s. (33.35mm/s) LP mode: 21/32 i.p.s. (16.67mm/s) SLP mode: 7/16 i.p.s. (11.12mm/s)	Weight:	5.7 lbs. (2.6kg)
Record/Playback Time:	8 HRS. with 160 min. type tape used in SLP mode	Dimensions:	8-7/16"(W) × 2-3/4"(D) × 10-3/8"(H) (215mm × 69.5mm × 263mm)
FF/REW Time:	Less than 6 min. with 120 min. type tape	Weight and dimensions shown are approximate.	Specifications are subject to change without notice
Heads:	Video: 4 rotary heads Audio: 2 stationary heads Control: 1 stationary head Erase: 1 full track erase 1 audio track erase for audio dubbing		
Input Level:	Video: VIDEO IN Jack (RCA type) 1.0Vp-p, 75Ω unbalanced Audio: MIC IN Jack (Left, Right) -70dB, 4kΩ unbalanced

# PORTABLE CLASSIFICATION

AS YOU SEE ON THE COMBINATION CHART, THERE ARE SEVERAL COMBINATED MODELS FOR 1984 PORTABLE VCR LINE.

FOR PREVENTION OF DUPLICATED INFORMATION, SERVICE MANUALS ARE INDIVIDUALLY ARRANGED, ONLY SUCH AS DECK PORTION, TUNER AND PLUG-IN AC ADAPTOR.

IN CASE OF THE SERVICE FOR COMBINATED MODELS, PLEASE REFER TO APPROPRIATE MANUALS WHICH ARE SHADED ON THE CHART.

AS EXCEPTIONAL ITEMS, PACKAGE INFORMATION FOR THE COMBINATED MODELS IS INCLUDED IN THE MANUALS OF THE TUNER AND THE PLUG-IN AC ADAPTOR.

PLUG-IN AC ADAPTOR/ TUNER	PV-A580	PV-A850	PV-A860	PV-A118	PV-A820

# INTRODUCTION

This Service Manual contains information which will allow the service technician to understand and service the Panasonic Portable VHS Video Recorder Model PV-8000.

Some of the many special features include recording time up to 8 hours, portability, soft touch function controls, convenient 4 power source system (battery pack, the tuner unit, a car battery cary, plug-in AC adaptor), minimal picture interference during add-on recording, multimotion playback, an one touch connection method to the tuner and it is light weight and very compact.

These beatures in addition to the basic VHS format make the PV-8000 an ideal unit for your education, recreation and entertainment.

Just slightly ahead of our time...Panasonic

## CONTENTS

SPECIFICATIONS .....	Cover
SAFETY PRECAUTIONS .....	1-2
ELECTROSTATICALLY SENSITIVE (ES) DEVICES .....	1-3
PORTABLE SYSTEM/FEATURES.....	1-4
DESCRIPTION OF CONTROLS .....	1-5
GLOSSARY OF TERMS.....	1-7

# SAFETY PRECAUTIONS

## GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shileds are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

## LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\text{M}\Omega$  and  $5.2\text{M}\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be  $\infty$ .

Figure 1

## LEAKAGE CURRENT HOT CHECK (See figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5\text{k}\Omega$ , 10 watts resistor, in parallel with a  $0.15\mu\text{F}$  capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

# ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.  
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device).

# PORTABLE SYSTEM/FEATURES

## FEATURES

- Compact and light
- G4 heads to produce noiseless still/slow pictures
- 2-channel (stereo) Audio
- 12 Function Wired Remote Control

This symbol warns the user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any inside part of this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

# DESCRIPTION OF CONTROLS

## TOP and FRONT

- **CASSETTE HOLDER**
- **BATTERY EJECT BUTTON (on side)**  
To remove the Battery, push this button.
- **TRACKING CONTROL**  
Normally this control is left in the center (detent) position, however if the playback picture contains bands of noise, readjust this control until the noise disappears.
- **SLOW TRACKING CONTROL**  
If the slow-motion or still picture contains bands of noise, this control may require adjustment.
- **TAPE THICKNESS SWITCH**  
This switch is used to account for tape thickness when calculating the remaining tape time. When T-160 tape is used, set this switch to THIN. Otherwise, leave it at NORMAL.
- **TAPE SPEED SELECTOR (SP/LP/SLP)**  
Set this selector for the desired tape speed of a recording.
- **ADAPTOR-CONNECTOR (on rear)**  
This is used to connect the RECORDER to the TUNER with a single connection.
- **PUSH Button Controls (See next page.)**
- **INDICATOR PANEL (See next page.)**
- **RF OUTPUT CONNECTOR (on rear)**  
Alternate connection to a TV. This is the RF Converter (Channel 3 or 4) output.
- **REMOTE CONTROL JACK**  
For connecting the Editing Controller (optional) or the Wired Remote Control.
- **POWER SWITCH**  
This switch is used to turn the RECORDER on and off.
- **CAMERA REMOTE SWITCH**  
When Camera Recording, this switch may be set to ON, if the remote control feature of your camera is to be used. When the camera you are using does not have remote control features set this switch to OFF.

## SIDE

- **EARPHONE/AUDIO OUT JACK**  
For connecting an Earphone, or a Monitor TV and another VCR using Audio-Output Cord.
- **VIDEO OUTPUT CONNECTOR**  
For connecting to a Monitor TV or another VCR.
- **VIDEO INPUT CONNECTOR**  
For connection from another VCR.
- **RF CONVERTER CHANNEL SELECTOR**  
Set to channel 3 or 4, whichever is not used in your area.
- **BATTERY COMPARTMENT**
- **CAMERA INPUT TERMINAL**  
For connecting a portable video camera (optional).
- **MICROPHONE INPUT JACK (L/R)**  
For connecting a Microphone or Stereo Line Adaptor. This is useful for recording and Audio Dubbing.
- **CAMERA STEREO/MONO SWITCH**  
During Camera Recording with a stereo camera, set this switch to STEREO.
- **NR SWITCH**  
Set this switch ON for audio noise reduction.
- **AUDIO SELECTOR SWITCH**  
This switch is used to select the audio signal for the TV speaker.

## PUSH BUTTON CONTROLS

- **PLAY BUTTON**  
Push this button to play back recorded tapes. "PLAY" and "▶" appear on the Indicator Panel.
- **STOP BUTTON**  
Push this button to stop the tape.
- **EJECT BUTTON**  
Push this button to insert or to remove cassette.
- **PAUSE/STILL BUTTON**  
Push this button to temporarily stop the tape movement in either the recording or playback mode. During playback, a still picture is produced when the pause is used. Push again to release pause. When this button is pushed "PLAY" and "⏸" appear on the Indicator Panel.
- **SLOW BUTTON**  
While viewing a still picture, push this button to advance the picture one frame at a time. "PLAY" and "⏮" appear on the Indicator Panel. During the playback mode, pushing this button will allow you to view a slow-motion picture. When this button is pushed, "PLAY" and "▶" appear on the Indicator Panel.
- **RECORD BUTTON**  
Recording is started by pushing this button and the PLAY Button at the same time. "REC" and "▶" appear on the Indicator Panel.
- **RESET BUTTON**  
Pushing this button causes the Tape Counter to return to "0000".
- **MEMORY BUTTON**  
When this button is in the "ON" position, the tape will stop when the Tape Counter reaches "0000" during forward or reverse tape movement in FF, REWIND or VIDEO DUB.
- **AUDIO DUB BUTTON**  
When this button is pushed simultaneously with the PLAY Button, sound from another source can be recorded on the tape in place of the original sound.
- **FAST FORWARD/SEARCH▶▶BUTTON**  
Push this button to move the tape forward rapidly. "▶▶" appears on the Indicator Panel. During the playback mode, holding this button down will allow you to view the picture in the forward direction rapidly. "PLAY" and "▶▶" appear.
- **REWIND/SEARCH◀◀BUTTON**  
Push this button to rewind tapes. "◀◀" appears on the Indicator Panel. During the playback mode, holding this button down will allow you to view the picture in reverse rapidly. "PLAY" and "◀◀" appear.

## INDICATOR PANEL

- **FUNCTION INDICATOR "▶▶▶▶"**  
This shows the mode of VCR (PLAY, REC, REW, FF, PAUSE, STILL, SEARCH, FRAME ADVANCE, SLOW).
- **DEW INDICATOR "⚡"**  
This indicator appears if excessive moisture condenses in the unit. If the DEW Indicator is ON, the unit will not operate. If this happens, the DEW Indicator will flash for about 3 seconds and the RECORDER will automatically turn off. In this case, wait until the indicator no longer flashes when the RECORDER is turned on again.
- **CASSETTE-IN INDICATOR "📼"**  
This indicator shows the condition of the cassette tape in the unit.
- **MEMORY INDICATOR "M"**  
When MEMORY Button is set to ON, this indicator appears.
- **DUBBING INDICATOR "A DUB" "V DUB"**  
When audio dubbing or video dubbing is set, this indicator appears.
- **REMAINING TAPE INDICATOR "8:88"**  
This indicator shows the remaining length of tape time in 5-minute units.
- **BATTERY INDICATOR "E - - - F"**  
This indicator shows the condition of the battery charge.
- **TAPE COUNTER "8888"**  
Tape counter number is displayed.

# GLOSSARY OF TERMS

## ACC

Automatic Color Control used to maintain an overall constant color signal level in the color circuits.

## ACK

Automatic Color Killer.

## Adjacent Track

This is the name of the video track to the immediate left or right of the track of concern.

## AFC

Automatic Frequency Control used to phase-lock the color circuits to either the recording or playback color signal, in order to achieve a stable color signal.

## AFT

Automatic Fine Tuning...This is a special circuit found in most recent TV sets which makes the local oscillator of the TV tuner follow the channel of concern in order to produce a stable IF frequency. In other words, if for any reason the TV station being received changes frequency, the AFT circuit will automatically compensate so that no interference will be seen on the screen, i.e., no manual fine tuning is necessary.

## AGC

Automatic Gain Control used to maintain an overall constant picture level in the luminance circuits.

## APC

Automatic Phase Control used to help phase lock the color circuits to either the recording or playback color signal in order to achieve a stable color signal.

## Azimuth

A term used to describe the left to right tilt of the gap of a recording head, if it could be viewed straight on.

## Balanced Modulator

A circuit so designed to give as an output the frequency sum or frequency difference of its two input signals. Any special characteristics of one of the input signals will be present in the output signal.

## Beats

A term used to describe the unwanted signals produced when two original signals are allowed to be mixed together.

## Bipolar PG

Pulse Generator signals that have both positive and negative excursions.

## Burst

A short time occurrence (8 to 10 cycles) of the 3.58MHz subcarrier signal, appearing right after horizontal sync but centered on the blanking portion of the video waveform. Burst is used to keep the color oscillator of a TV receiver locked to the broadcast station.

## B/W

Abbreviation for Black and White.

## C

Capacitor.

## C Signal

The color portion of a video signal.

## Capstan

A small rotating metal dowel which drives the recording tape to assure positive tape movement.

## Chroma

The color portion of a video signal.

## Chrominance

The color portion of a video signal.

## Clamp

The process of giving an AC signal a specific DC level.

## Control Signal

A special signal recorded onto the video tape which is used during playback as a reference for the servo circuits.

## Converted Subcarrier

This is the process of frequency shifting the color 3.58MHz subcarrier and its sidebands down to 629kHz.

## Crosstalk

The name given to the unwanted signals obtained when a video head picks up information from an adjacent track.

## CUE

To scan the playback picture at a faster than normal speed in the Forward direction.

## D

Diode.

## DL

Delay Line.

## Dark Clip

After emphasis, the negative going spikes (undershoot) of a video signal may be too large in amplitude for safe FM modulation. A dark clip circuit is used to cut off these spikes at an adjustable level.

## DDC

Direct Drive Cylinder...as used in VHS, this means that the video heads are driven by a self-contained brushless DC motor using no belts or gears. DD cylinders produce pictures with better stability.

## Delta Factor ( $\Delta f$ )

A term used to indicate that a playback signal off the video tape has some jitter or "wow and flutter".  $\Delta f$ , or "a change in frequency" means that the color signal off the tape is not a stable frequency of 629kHz, but rather a signal whose frequency at any instant is some small amount above or below 629kHz.

## Deviation

A term used to describe how far the FM carrier swings when it is modulated. In VHS the upper limit is 4.4MHz

## Dew Detector

A variable resistor whose resistance value depends upon the ambient humidity.

## Dihedral

A term used to describe the relative position between the two video heads as they are mounted in the head cylinder. Perfect dihedral means that the tips of the heads are exactly 180° apart.

## Dropout

A momentary absence of FM or color signal off the tape, whether due to uneven oxide or a coating of dust on the tape or video heads.

**Duty Cycle**

In describing a rectangular waveform, the "duty" refers to the percentage of off time and on time for one complete cycle. 50—50 means that there are equal periods of off time and on time for one cycle and this would be a square wave.

**E-E**

Electronics to Electronics...this is the picture viewed on the TV set when a recording is being made. This picture goes through some but not all of the circuits of the recorder and is used to test the operation of said circuits.

**EQ**

Shortened form of "Equalization", used in the audio circuits.

**Emphasis**

The process of boosting the level of the high frequency portions of the video signal.

**FG**

Frequency Generator used in the servo circuits.

**FL**

Filter.

**FM Signal**

The luminance portion of the video signal is used to control the frequency of astable multivibrator. The output of this multivibrator is a frequency modulated (FM) signal shifting from 3.4 MHz to 4.4 MHz (plus sidebands).

**Field**

One half of a television picture. A field consists of 262.5 horizontal scanning lines across the picture tube. Two fields are necessary to complete a fully scanned TV picture (frame). First, one field is "sprayed" on the picture tube, starting at the top of the tube with Line 1, and ending at the bottom with Line 262.5. Then, the next field begins at the top of the tube again with Line 262.5 and ends at the bottom with Line 525. The lines of the second field lie in-between the lines of the first field. This property of falling in-between lines is called "interlacing". The two sweeps of the picture tube, or two fields make up one complete TV picture of "frame". Frame repetition is 30 Hz, therefore field repetition is 60 Hz.

**Flagwaving**

This is the term used to describe a TV set's ability to accept unstable playback pictures from a video tape recorder. All home VTR's have some degree of playback instability. A TV set with a long horizontal AFC time constant may not recover from the VTR's instability before the active picture is being scanned. This can cause a bending or flapping from side to side of the top inch or so of the screen. This movement is called "flagwaving".

**Frame**

One complete TV picture. See "Field".

**Gate**

A circuit which will deliver an output only when a specific combination of its inputs are present. For use in analog or digital applications.

**Guard Band**

This is the space between video tracks on the video tape in the SP mode. Guard bands contain no information.

**Hall Effect IC**

An external magnetic field causes current to flow in this type of device.

**HD**

Horizontal Drive signal.

**Head Cylinder**

A cylindrical piece of metal which houses the video heads. The tips of the heads protrude slightly from the surface of the cylinder so that they may scan the tape as the cylinder spins.

**Head Switching**

The action of turning off during playback, the video head which is not in contact with the video tape. A particular video head will be turned off 30 times per second. This is done so that the head which is not scanning the tape, and therefore not delivering a good signal, cannot contribute any noise to the playback signal.

**Head Switching Pulse**

The signal which is applied to the Head Amplifier to perform head switching. This is a square wave at 30 Hz, with a 50—50 duty cycle.

**Helical**

A word used to describe a general type of VTR in which the tape wraps around the video head cylinder in the shape of a 3-dimensional spiral, or "helix". The video tracks are recorded as a series of slanted lines.

**IC**

Integrated Circuit.

**Interchangeability**

A term used to describe how well a particular VTR will play back a tape recorded on another VTR of the same type. Good interchangeability indicates good playback.

**Interlacing**

The property of the scan lines of two television fields to lie in-between each other. See "Field".

**Interleaving**

A term used to indicate that the harmonics of the chrominance signal lie in-between the harmonics of the luminance portion of the video signal as it is viewed on a spectrum analyzer. This means that the color information of a video signal does not interfere with, although it is broadcast at the same time as, the luminance information.

Also, signals which have this interleaving property are not readily seen on a TV screen, because of their virtual cancellation characteristics.

Interleaving signals (fi) must have the following frequency relationship:

$$f_i = \left( \frac{2n+1}{2} \right) \times f_H \quad (n = 0, 1, 2, 3, 4, \dots)$$

$$f_H = 15,734 \text{ Hz (H sync frequency)}$$

**Jitter**

The name of the effect on the playback picture if a VTR has too much "wow and flutter". The picture appears to have a rapid shaking movement.

**L**

Coil.

**Luminance**

This is the portion of video signal which contains the sync and B/W information.

**MMV**

Monostable Multi-Vibrator...Usually an IC device which gives a logic high or low output with a variable duration upon receipt of an input pulse or transition.

### **Non-Linear Emphasis**

This is similar to regular emphasis with the difference that small level high frequency portions of the signal are given more of a boost than higher level high frequency portions.

### **NTSC**

The National Television Systems Committee. These four letters identify the United States color television standard.

### **O.T.R.**

One Touch Recording (O.T.R.) enables you to do impromptu timer recordings at any time. When you have to go out for urgent matters or you are going to sleep, this function is very useful. Just select the channel and push the O.T.R. Button for 30 minutes to 2 hours of recordings. After recording, the VCR will be turned off automatically.

### **PG**

Pulse Generator used in the servo circuits.

### **Q**

A term used to describe the graphic response of a filter or tuned amplifier.

### **R**

Resistor.

### **Review**

To scan the playback picture at a faster than normal speed in the Reverse direction.

### **RF**

Radio Frequencies.

### **Rotary Chroma**

The name of the process used in VHS to change the phase of the chrominance signal at a rate of 15,734 (same as H sync frequency) times per second.

### **Rotary Transformer**

A device used to magnetically couple RF signals to and from the spinning video heads, thus eliminating the need for brushes.

### **Sample and Hold**

A process used in comparator circuits by which the value of a particular signal is measured at a specific moment in time...then this value is stored for later use.

### **Search**

To scan the playback picture at a faster than normal speed in either the forward or reverse direction.

### **Servo**

Short for Servo mechanism. This is an electro-mechanical device whose mechanical operation (for instance motor speed) constantly being measured and regulated so that it closely matches or follows an external reference.

### **Skew**

Another way of saying Tension Error. Skew is actually the change of size or shape of the video tracks on the tape from the time of recording to the time of playback. This can occur as a result of poor tension regulation by the VTR, or by ambient conditions which affect the tape.

### **Subcarrier**

The name of the 3.58MHz continuous wave signal used to carry color information.

### **SS**

Slow and Still.

### **T**

Transformer.

### **TP**

Test Point.

### **TR**

Transistor.

### **Tension Error**

See "Skew".

### **Time Base Stability**

A term used to describe how closely the playback video signal from a VTR matches an external reference video signal...in regard to sync timing rather than picture content.

### **Tracking**

This is the action of the spinning video heads during playback when they accurately track across the video RF information laid down during recording. Good tracking indicates that the heads are positioning themselves correctly, and are picking up a strong RF signal. Poor tracking indicates that the heads are off track, and picking up low level RF signal or noise.

### **VCO**

Voltage Controlled Oscillator...An oscillator whose frequency of oscillation is governed by an external voltage.

### **Video Head**

This is the electro-magnet used to develop magnetic flux which will put RF information on the tape. In VHS, two video heads are mounted in a rotating cylinder around which the video tape is wrapped. As the cylinder spins, each video head is allowed to alternately scan the tape.

### **Video Track**

The name of the RF information laid down during recording, as a particular video head scans across the tape.

### **VHS**

Video Home System.

### **VTR**

Video Tape Recorder.

### **VV**

Video to Video...or...the actual playback picture produced from a tape during playback.

### **VXO**

Voltage Controlled Crystal Oscillator...Similar to VCO except that a quartz crystal is used as a reference which can be varied.

### **White Clip**

After emphasis, the positive going spikes (overhoot) of the video signal may be too large for safe FM modulation. A white clip circuit is used to cut off these spikes at an adjustable level.

### **XTAL**

Abbreviation for crystal.

### **Y Signal**

The B/W portion of a video signal containing B/W information and sync.

## Mechanical Adjustment Procedures

## Electrical Adjustment Procedures

### SPECIFICATIONS

**Power Source:** 12V DC  
 Battery PV-BP80  
 Prog. Tuner Unit PV-A820  
                                   PV-A850  
                                   PV-A860  
 Plug-in AC Adaptor PV-A118  
**Power Consumption:** Approx. 10 watts (16W with Camera)  
**Television System:** EIA Standard (525 lines, 60 fields)  
                                   NTSC color signal  
**Video Recording**  
     **System:** 4 rotary heads, helical scanning system  
                   Luminance: FM azimuth recording  
                   Color signal: Converted subcarrier phase  
                                   shift recording  
**Audio Track:** 2 track  
**Tape Format:** Tape width 1/2" (12.7mm), high density  
                   tape  
**Tape Speed:** SP mode: 1-5/16 i.p.s. (33.35mm/s)  
                   LP mode: 21/32 i.p.s. (16.67mm/s)  
                   SLP mode: 7/16 i.p.s. (11.12mm/s)  
**Record/Playback Time:** 8 HRS. with 160 min. type tape used in  
                                   SLP mode  
**FF/REW Time:** Less than 6 min. with 120 min. type tape  
**Heads:** Video: 4 rotary heads  
           Audio: 2 stationary heads  
           Control: 1 stationary head  
           Erase: 1 full track erase  
                   1 audio track erase for audio  
                   dubbing  
**Input Level:** Video: VIDEO IN Jack (RCA type)  
                   1.0Vp-p, 75Ω unbalanced  
           Audio: MIC IN Jack (Left, Right)  
                   -70dB, 4kΩ unbalanced

**Output Level:** Video: VIDEO OUT Jack (RCA type)  
                   1.0Vp-p, 75Ω unbalanced  
           Audio: AUDIO OUT Jack (RCA type)  
                   -9dB, 600Ω unbalanced  
           RF Modulated: Ch3/Ch4 switchable,  
                   72dBμ, (Open Voltage)  
                   75Ω unbalanced

**Video Horizontal**  
     **Resolution:** Color: more than 230 lines  
                   B/W: more than 230 lines

**Audio Frequency**  
     **Response:** SP mode: 100Hz~8kHz  
                   (10dB down) LP mode: 100Hz~6kHz  
                   SLP mode: 150Hz~5kHz

**Signal-to-Noise Ratio:** Video: SP mode: better than 41dB  
                   LP mode: better than 41dB  
                   SLP mode: better than 41dB  
                   (Rohde & Schwarz noise meter)  
           Audio: SP mode: better than 42dB  
                   LP mode: better than 40dB  
                   SLP mode: better than 40dB

**Operation**  
     **Temperature:** 32°F—104°F (0°C—40°C)

**Operating Humidity:** 10%—75%

**Weight:** 5.7 lbs. (2.6kg)

**Dimensions:** 8-7/16"(W) × 2-3/4"(D) × 10-3/8"(H)  
                   (215mm × 69.5mm × 263mm)

Weight and dimensions shown are approximate.

# MECHANICAL ADJUSTMENT PROCEDURES (PART-1)

## CAUTION

1. MECHANICAL ADJUSTMENT PROCEDURES in this manual are separated into 2 parts as described below.
2. PART (1) describes the items applicable to only this model.
3. PART (2) describes the common items applicable to all 1984 portable models. Therefore, please refer to appropriate items for servicing of this model.

## DISASSEMBLY OF CABINET PARTS

### 1. DISASSEMBLY FLOWCHART

This flowchart indicates disassembly steps of the cabinet parts and the P.C. Boards in order to gain access to the items necessary for servicing.

When reassembling, perform the steps in the reverse order. The bottom plate can be removed individually.

#### Note:

1. When removing the cabinet, work with care so as not to break the locking portions.

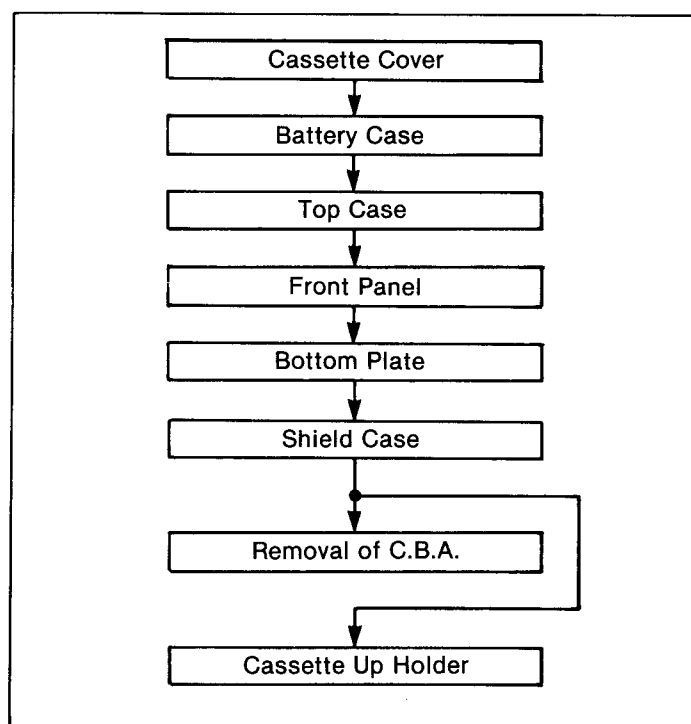

Fig. M1 Disassembly Flowchart

### 2. DISASSEMBLY METHOD

#### Notes:

1. Place the cloth or any other soft materials under the P.C. Boards or deck for preventing them being damaged while servicing.
2. When reinstalling, ensure the connectors are connected and any electrical components are not damaged.
3. Do not supply power to the deck during working except removal of the cassette cover.

#### 2-1. Removal of the Cassette Cover

Supply power to the deck and turn it on. Then press the EJECT button to raise the cassette up holder. Remove 2 covers and 2 screws. Then carefully lift and pull forward to remove.

Pay attention so as not to damage the locking portions.

Fig. M2 Removal of the Cassette Cover

#### Note:

When reinstalling, align the locking portions of the cassette holder unit first.

#### 2-2. Removal of Battery Case

1. First Confirm that the battery is not inside the battery compartment. If it is, remove the battery.
2. Place the deck upside down so the bottom plate faces upward.
3. Remove 2 screws and hold both right and left ends of the Battery Case. Then carefully lift and pivot the top portion to remove.

#### Note:

When reinstalling, first align the locking portions into the slots of the top case.

Fig. M3 Removal of the Battery

### 2-3. Removal of the Top Case

1. Remove the 2 screws (A) on the front panel.
2. Remove the 4 screws (B) on the top case. Then remove the top case by lifting the rear portion and pay attention so as not to damage the locking portions.

Fig. M4 Removal of the Top Case

#### Note:

When reinstalling, first align the locking portions into the projections of the front panel.

### 2-4. Removal of the Front Panel

1. Unlock the 2 locking tabs and hold both right and left ends of the front panel. Then carefully lift and pivot the bottom portion to remove.

Fig. M5 Removal of the Front Panel-(1)

2. Disconnect a connector P34 and remove 3 screws on the operation button unit.
3. Lift the operation button unit and pivot the top portion to remove.

Fig. M6 Removal of the Front Panel-(2)

#### Note:

When reinstalling, first insert the Locking portions into the slot of the front panel.

### 2-5. Removal of the Bottom Plate

1. Place the deck upside down so the bottom plate faces upward.
2. Remove 4 screws. Then remove the bottom plate by lifting.

Fig. M7 Removal of the Bottom Plate

### 2-6. Removal of the Shield Case

1. Remove a screw and carefully lift it up to remove.

Fig. M8 Removal of the Shield Case

## 2-7. Removal of the Luminance/Chrominance/Audio C.B.A.

1. Disconnect the battery catcher with P1 and disconnect the multi-connector with P2 and P3.
2. Remove 2 screws.
3. Disconnect 2 direct connectors P20 and P21.
4. Remove a shield case and disconnect 2 connectors P22 and P23.

Fig. M9 Removal of the Luminance/Chrominance/Audio C.B.A.

### Note:

Do not be damaged to the Film Integrated Circuit during removal of the Luminance/Chrominance/Audio C.B.A.

## 2-8. Removal of the Operation Button Unit

Pull the (A) portion. Then disconnect the flexible connector P31.

Fig. M10 Removal of the Operation Button Unit

## 2-9. Removal of the System Control C.B.A.

1. Unlock the 6 locking tabs and remove an insulation paper.
2. Disconnect the connector P32 and 2 flexible connectors P29 and P30.
3. Disconnect 2 hinges.

Fig. M11 Removal of the System Control C.B.A.

### Notes:

1. Use extreme care so as not to damage the locking tabs.
2. Refer to Fig. M10 and disconnect 2 flexible connectors.

## 2-10. Removal of the Servo/A.V.R C.B.A.

1. Remove 3 screws on the Servo/A.V.R C.B.A. section. Then remove 5 screws on the Main C.B.A. (Refer to Fig. M13)
2. Disconnect 3 direct connectors P24, P25 and P26.

Fig. M12 Removal of the Servo/A.V.R C.B.A.

## 2-11. Removal of the Main C.B.A.

1. Place the deck upside down so the main C.B.A. faces upward.
2. Remove 5 screws and disconnect 2 flexible connectors P39 and P40.
3. Disconnect 3 connectors P14, P15 and P33, and disconnect 2 flexible connectors P35 and P36.

Fig. M13 Removal of Main C.B.A.-(1)

**Note:**

Refer to Fig. M10 and disconnect 4 flexible connectors.

4. Replace the deck so the chassis faces upward.
5. Disconnect 9 connectors P4, P5, P6, P7, P8, P9, P10, P11 and P19. Then lift a chassis.

Fig. M14 Removal of Main C.B.A.-(2)

**2-12. Removal of the Cassette Up Holder**

Before remove the cassette up holder, open the system control C.B.A.

1. Remove 2 screws (A) on the front frame and 5 screws (B) on the chassis.
2. Eject the cassette up holder and disconnect a connector P8. Then remove the cassette up holder by lifting the front portion.

Fig. M15 Removal of the Cassette Up Holder-(1)

3. Remove a supply photo TR unit with a screw.

Fig. M16 Removal of the Cassette Up Holder-(2)

**Note:**

When reinstalling first insert the back portion.

## ADJUSTMENT PROCEDURES

### 1. REPLACEMENT OF UPPER CYLINDER UNIT

Work with extreme care when removing or replacing the upper cylinder unit.

Do not touch video heads during servicing.

1. Unsolder the 8 lead wires on the Head Relay Board.
2. Remove the 2 screws (A) and gently lift the upper cylinder unit from the shaft.

Fig. M17 Replacement of Upper Cylinder Unit-(1)

#### Note:

Do not remove the 3 screws (B).

3. Before reinstalling a new unit, clean the DD cylinder shaft and the surface that it engages with on the upper cylinder with a soft cloth saturated with Freon TF.

Fig. M18 Replacement of Upper Cylinder Unit-(2)

4. Install new unit carefully so that the 8 lead wires are properly matched on the Head Relay Board. For details on the installation position, refer to Fig. M17 and Fig. M19.

#### Note:

Install 8 lead wires with an extreme care not to damage them.

Fig. M19 Replacement of Upper Cylinder Unit-(3)

5. Tighten the 2 screws (A) and resolder the 8 lead wires to the Head Relay Board.
6. Clean the Upper Head Cylinder with a deerskin swab saturated with Freon TF.

#### Note:

Upon completion of replacement, confirm performance. And if required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".

### 2. ADJUSTMENT OF V-STOPPERS

#### Equipment Required:

V-Stopper Adjustment

Fixture .....VF KS0034

1. Remove the DD Cylinder Unit from chassis. (Upper Cylinder Unit does not need to be removed from the DD Cylinder motor.) Refer to "REPLACEMENT OF DD CYLINDER UNIT" section.
2. Loosen 4 screws and install the fixture. Push the V-Stoppers snugly against the pins and tighten the 4 screws.

Fig. M20 ADJUSTMENT OF V-STOPPERS

### 3. CONFIRMATION AND ADJUSTMENT OF CAPSTAN SEAL

**Specification:** 0.1~0.3mm

Adjust the Capstan Seal so the height becomes as specified.

**Fig. M21 Confirmation/Adjustment of Capstan Seal**

**Note:**

Capstan Seal shall be out of contact with Pressure Roller and Capstan Holder.

## SERVICE PROCEDURES

Work with extreme care when repairing the deck. Do not touch the metallic foil and the metal during servicing. When opening of C.B.A. or connection of Extension Cables do not supply power to the deck.

**Notes:**

1. The flexible wire has the conductors only on one side of both ends, therefore work with extreme care to be connected correctly with female connector.

**Fig. T1 Connection Method of Flexible Connector**

If Flexible Cable is reversely connected, the unit will be in the STOP MODE or NON-OPERATIONAL condition. (In case of above reconnect cable correctly.)

2. When any checking is required in the RECORDING MODE, make short circuit of two pins P33 on the MAIN C.B.A. Do not forget to remove short circuit when reassembling.
3. When connect the cable, first insert completely, then push the Female Connector. Take reverse step when disconnection.

### 1. OPENING OF C.B.A.

1. Remove 5 screws and disconnect 2 flexible connectors P39 and P40 on the Main C.B.A..
2. Unlock the 6 locking tabs on the System Control C.B.A. and remove the insulation paper. Use extreme care so as not to damage the locking tabs.

**Fig. T2 Opening of C.B.A.-(1)**

3. Remove 3 screws and disconnect 3 connectors P24, P25 and P26 on the Servo/A.V.R. C.B.A. Work with care not to damage the Film Integrated Circuit on the Luminance/Chrominance/Audio C.B.A.

**Fig. T3 Opening of C.B.A.-(2)**

4. Disconnect 2 connectors (P33 and P15) and 2 flexible connectors (P35 and P36) on the Main C.B.A.

Fig. T4 Opening of C.B.A.-(3)

**Note:**

When closing the Main C.B.A., leads of P14 must be restored correctly in the front frame.

5. Remove 2 screws and disconnect 2 connectors (P20 and P21).
6. Loosen the clumper and open the shield case.

Fig. T5 Opening of C.B.A.-(4)

## 2. CONNECTION METHOD OF EXTENSION CABLES

**Equipment Required:**

Extension Cable Kit.....VFKS0035

**Consists of**

- |                                   |          |
|-----------------------------------|----------|
| (1) Extension Cable (A) .....     | VFKS0036 |
| (2) Extension Cable (B) .....     | VFKS0037 |
| (3) Extension Cable (C) .....     | VFKS0042 |
| (4) Extension Connector (A) ..... | VFKS0038 |
| (5) Extension Connector (B) ..... | VFKS0039 |
| (6) Extension Connector (C) ..... | VFKS0040 |
| (7) Extension Connector (D) ..... | VFKS0041 |
| (8) Extension Connector (E) ..... | VFKS0044 |

Fig. T6 Connection Method of Extension Cables-(1)

**Note:**

When connecting the flexible connector, refer to Fig. T1.

1. Connect the connector (E) between P20 and P13, and the Connector (D) between P21 and P12.

Fig. T7 Connection Method of Extension Cables-(2)

2. Extend the flexible connector P39 with the Cable (B) and the Connector (B). Then extend the flexible connector P40 with the Cable (A) and the Connector (A).

**Fig. T8 Connection Method of Extension Cables-(3)**

3. Extend the connector P15 with the Cable (C). Then extend the flexible connectors P35 and P36 with the Cable (A) and the Connector (A).
4. Unlock 2 hinges and connect 2 Connectors (C). One shall be connected between P16 and P26, and the other one between P17 and P25. Then connect the Connector (D) between P18 and P24.

**Fig. T9 Connection Method of Extension Cables-(4)**

### 3. PURPOSE OF MULTI EXTENSION CABLE

When the Video Deck or Dockingable Tuner is inspected or repaired in condition of connecting them, Multi Extension Cable shall be used between Video Deck and Dockingable Tuner.

**Fig. T10 Purpose of Multi Extension Cable**

# MECHANICAL ADJUSTMENT PROCEDURES (PART-2)

## 1. PROCEDURE FOR CLEANING OF UPPER CYLINDER UNIT

1. Position the video head to permit access for cleaning and hold the upper cylinder to keep it from turning while cleaning.
2. Gently rub the video head in direction of tape travel with Head Cleaning Stick moistened with Freon TF.
3. Repeat for the other video head.

Fig. 1 Head Cleaning

### Notes:

1. Do not rub vertically.
2. Do not apply any pressure to head.  
If contaminant is not easily removed, continued gentle wiping will usually remove the substance.
3. Do not rotate the Upper Cylinder Unit clockwise when cleaning it.

## 2. REPLACEMENT OF DD CYLINDER UNIT

Work with extreme care when removing or replacing the DD cylinder unit.

Do not touch video heads during servicing.

1. Remove the screw (A) and the Grounding Spring, then remove the screw (B) and the Grounding Plate Bracket.

Fig. 2 Replacement of DD Cylinder Unit(1)

2. Disconnect 2 connectors under the cylinder section.
3. Remove the 3 screws and DD cylinder unit.

Fig. 3 Replacement of DD Cylinder Unit(2)

### Note:

Since there is very little clearance between DD cylinder unit and chassis, remove the DD cylinder unit gently and carefully.

4. Reinstall the new cylinder unit, tighten the 3 screws. Then connect 2 connectors.

### Note:

Reinstall the new DD cylinder unit, so that the projections (A) on the chassis agrees with the hollows (B) under the cylinder.

Fig. 4 Replacement of DD Cylinder Unit-(3)

**Notes:**

1. Gently rub the video head in direction of tape travel with Head Cleaning Stick moistened with Freon TF.
2. After replacement, confirm performance. If any further maintenance is required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".
3. After replacing the new DD cylinder unit, check to see if the Grounding Spring is correctly set in a position within 2mm to the right from the center of the cylinder shaft as shown in Fig. 5.
4. Never install the Grounding Spring to any position to left from the center of the cylinder shaft, but always within a maximum of 2mm to the right of the center of this shaft.

Fig. 5 Confirmation of GND Spring Installation Position

5. Do not touch Mounting Base with screws on the DD cylinder unit.

### 3. CONFIRMATION OF BRAKE TORQUE

**Equipment Required:**

Dial Torque Gauge  
Adaptor for Gauge

1. Attach the adaptor to the torque gauge and place the deck in STOP mode.
2. Place the torque gauge on the reel table. The weight of gauge should not rest on the reel table.

Fig. 6 Confirmation of Brake Torque-(1)

3. Turn torque gauge in either direction indicated in the Fig. 7 and read the gauge when the brake begins slipping.

**Note:**

If proper brake torque can not be obtained, clean the rotating surface of reel table with a soft cloth and recheck torque before replacing brake pad.

Fig. 7 Confirmation of Brake Torque-(2)

#### 4. CONFIRMATION OF BACK TENSION

##### Equipment Required:

Back Tension Meter (Tentelometer, Model T2-H7-UM, Purchase Locally)

VHS Cassette Tape (120 Minutes Tape)

Specification: 25~30g

1. Pull the erase head in the direction indicated by the arrow and hold it by adhesive tape.
2. Play back the cassette tape recorded in the SP mode from its beginning and wait until tape running has stabilized. (for approx. 10 to 20 seconds)
3. Insert tension meter in tape path and confirm reading.

Fig. 8 Confirmation of Back Tension

##### Notes:

1. Make sure that the three probes of the meter are all in good contact with tape, but out of contact with any parts while measuring.
2. It is recommended to be measured three times as the tension meter is very sensitive.

#### 5. HEIGHT ADJUSTMENT OF REEL TABLES

##### Equipment Required:

Post Adjustment Plate

Reel Table Height Gauge

Specification: .....0~0.15mm

\* Cut-out on Post Adjustment Plate is reference of reel table height and their height is measured based on this reference.

1. Place the post adjustment plate over the reels, and put the gauge on the plate. Set the gauge to zero "0" with the foot scraper of the gauge touching the cut-out portion of the plate.

Fig. 9 Height Adjustment of Reel Tables-(1)

2. Then measure the top portion of reel table and confirm the difference just performed in former step. Do same for the other reel table.

Fig. 10 Height Adjustment of Reel Tables-(2)

3. If a height difference in readings between the cut-out portion of plate and reel tables is not 0~0.15mm (higher or lower), adjust the height of the reel to obtain specified height.
4. For adjustment add or reduce a washer located under the reel table.

Fig. 11 Height Adjustment of Reel Tables (3)

**Note:**

When adjusting the height of the tables, the DD Reel Unit needs to be removed from the chassis.  
(Removal of the DD Reel Unit.)  
Remove 7 screws and carefully lift it out.

Fig. 12 Bottom View of DD Reel Unit

## 6. HEIGHT ADJUSTMENT OF TAPE GUIDE POSTS

**Equipment Required:**

Hex. Wrench (0.9mm)  
Post Adjustment Plate  
Reel Table Height Gauge  
Nut Driver (5.5mm)  
Post Adjustment Screwdriver

Fig. 13 Height Adjustment of Tape Guide Posts-(1)

1. First install the post adjustment plate and lower all posts if required so that they are the condition as shown.  
(Lower end of post, tape guide, should be lower than foot scraper of gauge.)  
Loosen a hex. screw located on the lower portion of posts (P2 & P3) then turn the top of the posts with post adjustment screwdriver.

Fig. 14 Height Adjustment of Tape Guide Posts-(2)

2. Place the height gauge on the adjustment plate and place the foot scraper of gauge to the post.  
(The foot scraper of gauge should be fully lowered till it touches the Post Adj. Plate.)

Fig. 15 Height Adjustment of Tape Guide Posts-(3)

3. Set the height gauge to zero and slowly raise the post until it just touches the foot scraper of gauge. For adjustment of P1 & P4, use the nut driver.

**Note:**

Upon completion of adjustment, tighten hex. screws on P2 and P3 and install the post cap on P4. When the post cap on P4 is reinstalled, orient it as shown below viewing from the direction indicated by the arrow.

Fig. 16 Height Adjustment of Tape Guide Posts-(4)

## 7. HEIGHT ADJUSTMENT OF PULL OUT POST

### Notes:

1. The adjustment should be performed after the adjustment of P4 as the spec. is based on height of P4.
2. The adjustment should be performed in the Loading completion mode.
3. Before this adjustment, simulate the cassette down condition without cassette tape.

#### (A) In Case of Front Loading Type VCR

- (1) Remove the cassette compartment. Do not disconnect the connection cable from the Cassette Loading Motor.
- (2) Insert a cassette tape into the cassette compartment.

#### (B) In Case of Top Loading Type VCR

- (1) Remove the cassette compartment, and cover the take up and supply photo transistors with black tape. Press the Lock Lever (B) until the cassette down condition as shown below.

Fig. 17 Cassette Down Condition Without Cassette Tape

- (2) After this adjustment is finished, return the Lock Lever (B) to Eject position as described below.
- (3) How to return Eject position. Pull up the Lock Lever (A) as direction indicated by the arrow shown in Fig. 17.

### Equipment Required:

Post Adjustment Plate  
Reel Table Height Gauge  
Nut Driver (5.5mm) .....Purchase Locally

### Specification: 0mm

1. Push the play button for loading.
2. As soon as loading is completed, disconnect the AC plug and remove the cassette up holder.
3. Place the post adjustment plate, put the reel table height gauge on the plate and set height gauge to zero with condition the foot touches on the height adjustment plate.

Fig. 18

4. Slightly lower the post by turning the nut clockwise. Place the foot to the post as shown.
5. Then slowly turn the nut till the gauge reads the specified height.

Fig. 19 Height Adjustment of Pull Out Post

6. Reinstall the cassette compartment.
7. Play back a normal cassette tape and make sure that the edges of the tape are not curling against the edge of the posts P1, P2, P3, P4 and pull out post as shown in Fig. 20.

Fig. 20

Fig. 21

8. If curling appears, readjust each post.

## 8. TAPE INTERCHANGEABILITY ADJUSTMENT

### Note:

To perform these adjustment/confirmation procedures, make sure that the tracking control is set to the detent (fixed) position.

### Equipment Required:

Alignment Tape  
Post Adjustment Screwdriver  
H-Position Adjustment Screwdriver  
Hex. Wrench (0.9mm)  
Nut Driver (5.5mm)

### 8-1. Confirmation/Adjustment of Envelope Output

1. Connect the oscilloscope to the output of the Head Amp as shown below.

### Note:

Head Amp Output and the head switching pulse input for triggering the oscilloscope are shown in the Luminance Process Block Diagram of the VTR Service Manual.

Fig. 22 Connection of Oscilloscope

2. Playback the monoscope portion of the alignment tape and adjust posts P2 and P3 while watching the scope display so that RF envelope on the scope becomes as flat as possible.

Fig. 23 Confirmation of Envelope Output

3. If the scope display is as follows, adjust the height of P2 shown in Fig. 13.

Fig. 24 Adjustment of Envelope Output-(1)

4. If the scope display is as follows, adjust the height of P3 shown in Fig. 13.

Fig. 25 Adjustment of Envelope Output-(2)

5. When P2 and P3 posts are adjusted correctly the scope display becomes as shown below.

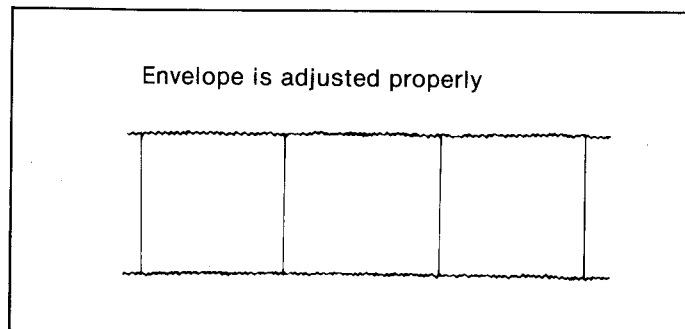

Fig. 26 Adjustment of Envelope Output-(3)

6. When adjustment is required, turn slowly and wait for servo lock. Be sure the tape travels over the post as shown.

Fig. 27 Adjustment of Envelope Output-(4)

## 8-2. Confirmation of A/C Head Height

### Note:

Unless the A/C Head is replaced, this procedure should not be performed.

1. Looking at the lower edge of the control head with the tape running, ensure that the lower edge of the tape runs along the lower edge of the control head. If it doesn't, slightly turn the nut (A) in either direction to correct. Clockwise to lower the head and counterclockwise to raise it.

Fig. 28 Confirmation of A/C Head Height

## 8-3. Confirmation of Tilt of A/C Head

This procedure should be performed after the height adjustment of P4.

1. Play back the tape and confirm the tape runs between lower and top limiters of post. And confirm the condition of tape running.
2. If the adjustment is required, turn counterclockwise the screw (C) so that the curling is apparent with lower edge of P4. Then turn clockwise the screw (C) so that the curling is smooth out.

Fig. 29 Confirmation of Tilt of A/C Head

#### 8-4. Adjustment of A/C Head Height and Azimuth

##### (A) Procedure for Mono A/C Head

1. Connect the oscilloscope to the Audio Output on the right side of the deck.
2. Play back the monoscope portion (6kHz, Mono) of the alignment tape.

Fig. 30 Adjustment of A/C Head Height and Azimuth

3. Adjust the screw (B) on the head base so the output level becomes maximum.

##### (B) Procedure for Stereo A/C Head

1. Set the Audio Select Switch to L + R position.
2. Connect the Audio Output Cord (VJPS0069) to the Audio Output on the right side of the deck.
3. Connect the oscilloscope CH1 to the Audio Output Cord (Left), and CH2 to the Audio Output Cord (Right).
4. Playback the color bar portion (3kHz, Stereo) of the alignment tape.
5. Adjust the screw (B) so that the CH2 envelope is maximized.

Fig. 31 Adjustment of A/C Head Height and Azimuth-(1)

6. Then, adjust the nut (A) so that the CH2 envelope is maximized.

Fig. 32 Adjustment of A/C Head Height and Azimuth-(2)

7. Playback the monoscope portion (6kHz, Monaural) of the alignment tape.
8. Then, adjust the screw (B) so that the phases of the both channels are matches as shown below.

Fig. 33 Adjustment of A/C Head Height and Azimuth-(3)

##### Note:

During this adjustment, the audio output level should be maximum.

#### 8-5. Horizontal Position Adjustment of A/C Head

1. Set the tracking control to the detent (fixed) portion. Connect the oscilloscope to the output of the Head Amp. Refer to Fig. 22 "Connection of oscilloscope".
2. Playback the monoscope portion of the alignment tape and confirm the RF signal envelope figure.
3. If adjustment is required, insert an H-position adjustment screwdriver into the Adjustment Nut.
4. Slowly turn the Adjustment Nut clockwise until the envelope output is maximized.

Fig. 34 Horizontal Position Adjustment of A/C Head

Fig. 35

## 9. ADJUSTMENT OF F.G. HEAD GAP

**Specification:** 0.18 ( $\pm 0.02$ )mm

1. Slightly loosen the 2 screws.
2. Hold the F.G. Head Unit with your fingers, and adjust the gap as specified.
3. After adjustment, tighten 2 screws.

Fig. 36 Adjustment of FG. Head Gap

### Note:

Do not flaw the F.G. Head or outside surface of the rotor.

## 10. ASSEMBLY AND ADJUSTMENT OF GEARS AND ROD

### GENERAL CONDITION

The mechanism of this model is mostly engaged to the System Control Circuit, through the mode select switch. Therefore the relation between the mode select switch and the cam gear decides all further mechanical movement of the mechanical parts such as levers, gears, rollers and so on. If the adjustment of this item is performed improperly, the deck will be unloaded or compulsorily stopped. And it will result being damaged at any mechanical or electrical parts.

### A. ADJUSTMENT OF LOADING ARM

1. Install the supply and takeup loading arm units so that the projection (A) on the takeup loading gear aligns with the projection (B) on the supply loading gear. Then install the 2 retaining rings on the supply loading gear and on the takeup loading gear. Ensure that the loading arm units are still in the fully unloading condition.

Fig. 37 Assembly and Adjustment of Gears and Rod-(1)

### Note:

Pay attention that the washers are remaining under the loading gears.

### B. ADJUSTMENT OF CAM GEAR

1. Make sure the position of Loading Arm as Fig. 33 before proceeding this adjustment.
2. Install the cam gear so that the hole on the cam gear meets the hole on the chassis. Then install the retaining ring.

Fig. 38 Assembly and Adjustment of Gears and Rod-(2)

3. Install the lock arm as shown in Fig. 39. Then install the retaining ring and the washer.

**Fig. 39 Assembly and Adjustment of Gears and Rod-(3)**

**Note:**

Pay attention that the washer is remaining under the lock arm.

**C. ADJUSTMENT OF LOCK GEAR**

1. Perform the adjustment after making sure the mechanism position that is described in previous item A and B.
2. Install the lock gear so that the projection (C) on the lock gear aligns with the projection (D) on the takeup loading gear.

**Fig. 40 Assembly and Adjustment of Gears and Rod-(4)**

3. Install the support plate with the screw.

**Fig. 41 Assembly and Adjustment of Gears and Rod-(5)**

**D. ADJUSTMENT OF MODE SELECT SWITCH**

1. Perform this adjustment after making sure the mechanism position that is described in previous item A, B and C.
2. Rotate the gear on the mode select switch so that it is in click (dentent) position. Then install the mode select switch so that the delta hole (E) on the rotary switch gear aligns with the projection (F) on the cam gear, and install the 2 screws.

**Fig. 42 Assembly and Adjustment of Gears and Rod-(6)**

**Note:**

There is one click point per 4 rotations.

3. Install the loading motor with 2 screws.

**Fig. 43 Assembly and Adjustment of Gears and Rod-(7)**

4. Confirm the cam gear is in the EJECT condition.

**E. ASSEMBLY PROCEDURE OF MAIN ROD, BRAKE ARM, BRAKE CAM GEAR**

1. Perform the assembly after making sure the mechanism position that is described in previous item A, B, C, and D.
2. Install the main rod so that the hole on the main rod meets the hole on the chassis. Then install the brake arm, the brake cam gear, the washer and the 3 retaining rings.

Fig. 44 Assembly and Adjustment of Gears and Rod(8)

## 11. ADJUSTMENT OF LEAF SWITCH

### Note:

This adjustment for Top Loading VCR only.

### Equipment Required:

Fine Adjustment Screwdriver

**Specification:** 0.9mm~1.3mm

1. Remove the DD Reel Unit from the chassis.
2. Slightly loosen a screw (A) and insert the Fine Adjustment Screwdriver to the Hole (B).
3. By rotating the Fine Adjustment Screwdriver, adjust the leaf switch so that gap (C) is 0 and the gap (D) between the upper and lower plates of the leaf switch is 0.9mm to 1.3mm, and tighten screw (A).
4. Install the DD Reel Unit.

Fig. 45 Adjustment of Leaf Switch

### Note:

After adjustment, confirm that the leaf switch turns On when the Cassette Up Unit is pressed down, and turns Off when the Cassette Up Unit is raised.

## 12. POSITION ADJUSTMENT OF RECORDING SAFETY SWITCH

### Note:

This adjustment Top Loading VCR only.

### Equipment Required:

Cassette Holder Fixture

Fine Adjustment Screwdriver

1. Place the fixture in place over the reel tables.
2. Confirm Rec. Safety Switch position is just turned ON.
3. When Rec. Safety Switch position is not right, remove the fixture and loosen a screw (A).
4. Insert the fine adjustment screwdriver into the hole (B), and adjust the position. Then tighten the screw (A).
5. Reinstall the fixture and confirm again.

Fig. 46 Position Adjustment of Recording Safety Switch-(1)

### Note:

When cassette with a safety tab is used, the Rec Safety switch Turns on and without a tab, it opens.

Fig. 47 Position Adjustment of Recording Safety Switch-(2)

## Servicing Fixtures & Tools

**VFKS0043 Multi Extension Cable**

# ELECTRICAL ADJUSTMENT PROCEDURES

## 1. TEST EQUIPMENT

To perform the electrical adjustments completely, the following equipments are required.

1. DVM (Digital Voltage Meter)  
Voltage Range: 0.001~50V
2. Regulated DC Power Supply Voltage:  
0~12V DC
3. Dual-trace Oscilloscope  
Voltage Range: 0.05~50V/Div.  
Frequency Range: DC~10MHz  
Probes: 10:1, 1:1
4. Frequency Counter  
Frequency Range: 0~10MHz
5. Signal Generator  
Sinewave: 0~10MHz
6. Sweep Generator  
Frequency Range: 0~10MHz
7. Color TV Receiver or Monitor
8. Plastic Tip Driver
9. VHS Alignment Tape: VFMS0001H6
10. AC Millivolt Meter: 0~3mVrms

## 2. ADJUSTMENT PROCEDURES

### Note:

Components and Test Points in each section are series numbers. But for, easy alignment only the last numbers are used on P.C. Board.

These adjustment procedures consist of the following sections.

	SERIES
1. A.V.R Section .....	1000
2. System Control Section .....	6000
3. Servo Section .....	2000
4. Audio Section .....	4000
5. Video Section .....	
Luminance .....	3000
6. Main Section .....	
Drive .....	2500
Jack .....	6900
7. Wired Remote Control Unit Section .....	

### 2-1. A.V.R Section

#### 2-1-1. +9.5V and +5V Regulator Adjustment

Test Points: TP1001, TP1002

Adjustments: R1025 (+9.5V), R1014 (+5V)

1. Connect the Multi-connector to the deck so that +12V is supplied to the deck.
2. Place the unit in STOP mode.
3. Connect the DVM to TP1001 on the A.V.R section.
4. Adjust the +9.5V (R1025) so that the voltage at TP1001 is 9.5 (+/-0.05)V DC.
5. Connect the DVM to TP1002 on the same section.
6. Adjust the +5V (R1014) so that the voltage at TP1002 is 5.1 (+/-0.05)V DC.
7. Remove the DVM.

### 2-2. System Control Section

#### 2-2-1. Under Cut Adjustment

Test Point: TP6001

Adjustment: R6049 (UNDER CUT)

1. Don't connect the Multi-connector to the deck.
2. Turn the UNDER CUT (R6049) counter-clockwise.
3. Connect a Regulated DC Power Supply and DVM to the battery terminal on the deck.
4. Adjust the Regulated DC power Supply so that the voltage is 10.35 (+/-0.03)V DC.

Fig. E1

5. Turn the Deck Power Switch ON.
6. Then slowly turn the UNDER CUT (R6049) on the System Control section clockwise until the "eb" mark is indicated (flashing) on the LCD counter for three seconds and the deck is placed in the OFF mode.  
Confirm that the Deck Power Switch is automatically turned OFF.
7. Adjust the DC Voltage to 10.50 (+0, -0.05)V DC.
8. Turn the Deck Power Switch ON.
9. Confirm that the Deck Power Switch is not automatically turned OFF.

### 2-3. Servo Section

#### 2-3-1. Head Switching Position Adjustment

Test Points: TP2004, TP3004

Adjustment: R2065 (PG SHIFT)

1. Connect the Multi-connector to the deck so that +12V is supplied to the deck.
2. Play back the color bar section of alignment tape.
3. Connect the scope CH1 to TP3004 on the Luminance section and CH2 to TP2004 on the Servo section.
4. Set the scope to the CHOP mode.
5. Also set the scope to the DELAY mode or expand the vertical interval of the signal from TP3004.

- Adjust the PG SHIFT (R2065) so that the playback head switching point is  $6(+ - 1)H$  before the start of vertical sync as shown below.

Fig. E2

- Change the slope selector on the scope from "+" to "-" and make sure that the other switching point is also  $6 \pm 1H$  before the beginning of vertical sync.

### 2-3-2. Tracking Control Adjustment

Test Points: TP2002, TP2004  
Adjustment: R2066 (TRACKING FIX)

- Connect the Multi-connector to the deck and supply a video signal on the right side panel or tune in a local on-air TV program.
- Set the tracking control on the front panel to the center position.
- Insert a cassette and make a recording in the SP mode for a few minutes.
- Play back the portion just recorded.
- Connect the scope CH1 to TP2004 and CH2 to TP2002 on the Servo section and expand sweep.
- Adjust the TRACKING FIX (R2066) so the T period is  $24.0 (+ - 0.04)msec.$

Fig. E3

### 2-3-3. Slow Free Run Adjustment

Test Point: TP2001  
Adjustment: R2067 (SLOW-FR)

- Connect the Multi-connector to the deck and supply a video signal on the right side panel or tune in a local on-air TV program.
- Insert a cassette and make a recording in the SLP mode.
- Connect the jumper from TP2003 to GND and from TP2007 to GND.
- Connect the frequency counter to TP2001 on the Servo section.
- Adjust the SLOW-FR (R2067) so that the frequency is  $360 (+ - 10)Hz.$
- Remove the frequency counter.

## 2-4. Audio Section

### 2-4-1. Bias Current Adjustment

Test Points: Audio Head Terminals (L, R)  
Adjustments: C4055 (L CH, BIAS ADJ)  
C4056 (R CH, BIAS ADJ)

- Don't supply any audio signal to the AUDIO INPUT on the right side panel or through the Tuner Unit.
- Insert a cassette and make a recording in the SP mode.
- Connect the AC Millivolt Meter as shown Fig. E4.

Fig. E4

- While the recording is taking place, adjust the LCH BIAS ADJ (C4055) on the Audio section so that the voltage is  $1.5 (+ - 0.05)mVrms.$
- Change the connected point of the AC Millivolt Meter as shown Fig. E5.

Fig. E5

6. During recording, adjust the R CH BIAS ADJ (C4056) on the Audio section so that the Voltage is 1.5 (+ -0.05)mvrms.
7. Remove the AC Millivolt Meter.

#### 2-4-2. Playback Gain Adjustment

Test Points: Audio Out Jacks (R, L)  
Adjustments: R4004 (PB GAIN-L)  
R4024 (PB GAIN-R)

1. Play back the Multi-Burst section (1kHz-Audio) or the alignment tape.
2. Connect the Audio output cord (Accessory: VJPS0069) to Earphone jack on the right side panel.
3. Connect dummy RCA plug to Audio out jacks(L CH and R CH) of the Audio output cord.
4. Connect the RCA pin to Video output jack.
5. Set the select switch to the STEREO position on the Audio output cord.
6. Connect the scope CH1 to Audio out jack (L) and CH2 to Audio out jack (R) of the Audio output cord as shown below.

Fig. E6

7. Set the DOLBY NR Switch on the right side panel to OFF.
8. Set the scope to CH1 mode and adjust the PB GAIN-L (R4004) on the Audio section so that the level of the waveform is 300 (+ -15)mVp-p.
9. Set the scope to CH2 mode and adjust the PB GAIN-R (R4024) on the Audio section so that the level of the waveform is 315 (+ -15)mVp-p.

Fig. E7

#### 2-4-3. Recording Gain Adjustment

Test Points: Audio Out Jacks (R, L) or TP4001, TP4002  
Adjustments: R4008 (REC LEVEL-L)  
R4028 (REC LEVEL-R)

##### (L Channel)

1. Supply a sinewave signal (1kHz, -10dB, 890mVp-p) to the MIC IN jacks(R and L) on the jack panel section, using the Stereo Line Adaptor (VJPS0068) as shown below.

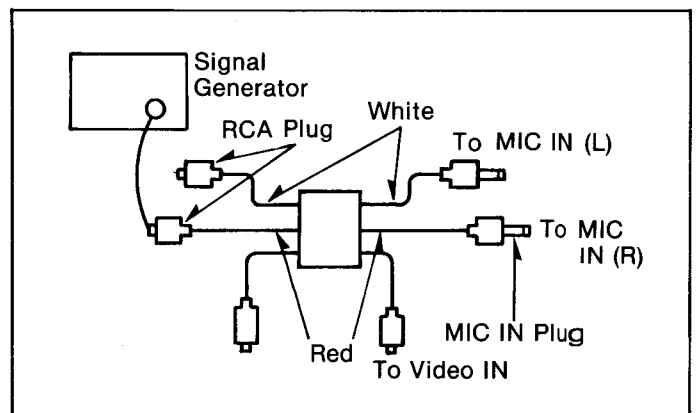

Fig. E8

2. Connect the RCA pin to the Video Output jack.
3. Place the unit in SP recording mode.
4. Connect the scope to TP4001 (L CH).
5. Playback the portion just recorded and read the level of the playback (TP4001).
6. Confirm that the Recording level and Playback level are the same.
7. If the Recording and Playback level are not the same, turn the REC LEVEL-L (R4008) slightly (either CW or CCW) so that levels are equal (CCW decreases the recording level and CW increases the recording level).
8. Repeat steps 5 and 6 a couple of times.  
(This adjustment must be repeated until recording level and playback level are the same.)

##### (R Channel)

1. Repeat L Channel Adjustment of step 1 to 3.
2. Connect the scope to TP4002.
3. Playback the portion just recorded and read the level of the playback (TP4002).
4. Adjust the REC LEVEL-R (R4028), set the playback level higher than the recording level for 0.5dB.

## 2-5. Video Section

### 2-5-1. Recording Current Adjustment

Test Points: TP3002 (HOT), GND  
Adjustment: R3001 (REC CURR)

1. Connect the Multi-connector to the deck and supply a color bar signal (1 Vp-p) to the video input on the right side panel.
2. Insert a cassette and make a recording in the SLP mode.
3. Connect the scope to TP3002 (HOT) and GND.
4. Turn the REC CURR (R3001) fully clockwise from foil side.
5. Confirm the chroma level at the same point is  $45(\pm 5)\text{mVp-p}$ .

Fig. E9

6. Then slowly turn the REC CURR (R3001) on the Luminance section so that V sync portion of the envelope at TP3002 is  $140(\pm 3)\text{mVp-p}$ .

Fig. E10

## 2-6. Drive Section

### 2-6-1. V Lock Adjustment

Equipment: TV Monitor  
Adjustments: R2536 (SLP), R2537 (SP)

1. Supply a color bar signal to the Video Input on the right side panel or tune in a local TV program.
2. Insert a cassette and make a recording in the SLP mode a few minutes.
3. Play back the portion just recorded, and push the Slow button.
4. Turn the Slow tracking VR for best picture on the TV screen.
5. Place the unit in PAUSE/STILL mode.
6. Adjust the V-LOCK-SLP (R2536) so that the center of picture is most stable.
7. Insert a cassette and make a recording in the SP mode a few minutes.
8. Play back the portion just recorded and push the PAUSE/STILL button.
9. Adjust the V-LOCK-SP (R2537) so that the center of the picture is most stable.

Fig. E11

### 2-6-2. Picture Control Adjustment

Test Point: TP3005  
Adjustment: R6944

1. Supply a color bar signal to the right side panel.
2. Place the unit in stop mode and in the SP mode.
3. Connect the DVM to TP3005 on the Luminance section.
4. Adjust the PIC CTL (R6944) so that the voltage at TP3005 is  $2.5(\pm 0.1)\text{V DC}$ .
5. Remove the DVM.

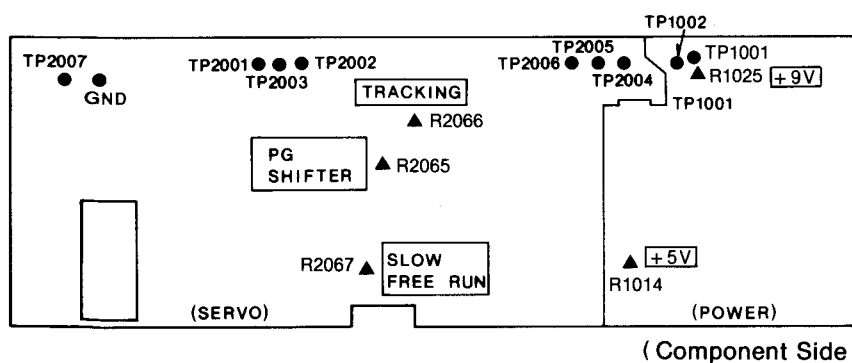

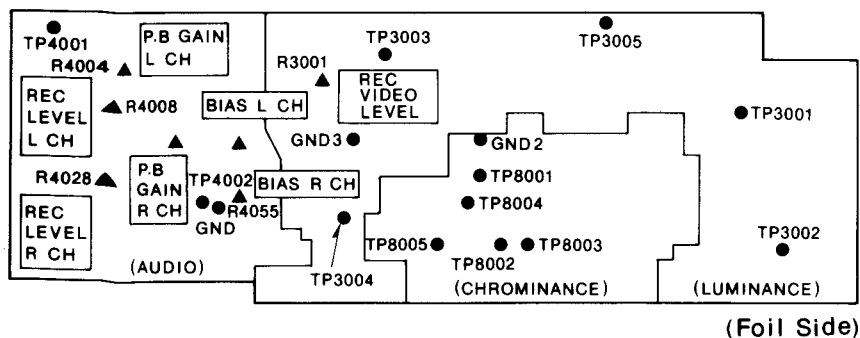

## 2-7. Wired Remote Control Unit Section

### 2-7-1. Microprocessor Clock Frequency Adjustment

1. Connect the WIRED REMOTE CONTROL UNIT to the deck.
2. Connect the frequency counter to pin 18 of IC1.
3. Adjust the VR1 so the frequency is  $25\pm 0.2\text{kHz}$ .

## SPECIFICATIONS

Power Source:	12V DC Battery PV-BP80 Prog. Tuner Unit PV-A820 PV-A850 PV-A860 Plug-in AC Adaptor PV-A118	Output Level:	Video: VIDEO OUT Jack (RCA type) 1.0Vp-p, 75Ω unbalanced Audio: AUDIO OUT Jack (RCA type) -9dB, 600Ω unbalanced RF Modulated: Ch3/Ch4 switchable, 72dBμ, (Open Voltage) 75Ω unbalanced
Power Consumption:	Approx. 10 watts (16W with Camera)	Video Horizontal	Resolution: Color: more than 230 lines B/W: more than 230 lines
Television System:	EIA Standard (525 lines, 60 fields) NTSC color signal	Audio Frequency	Response: SP mode: 100Hz ~ 8kHz (10dB down) LP mode: 100Hz ~ 6kHz SLP mode: 150Hz ~ 5kHz
Video Recording	System: 4 rotary heads, helical scanning system Luminance: FM azimuth recording Color signal: Converted subcarrier phase shift recording	Signal-to-Noise Ratio:	Video: SP mode: better than 41dB LP mode: better than 41dB SLP mode: better than 41dB (Rohde & Schwarz noise meter) Audio: SP mode: better than 42dB LP mode: better than 40dB SLP mode: better than 40dB
Audio Track:	2 track	Operation	Temperature: 32°F—104°F (0°C—40°C)
Tape Format:	Tape width 1/2" (12.7mm), high density tape	Operating Humidity:	10%—75%
Tape Speed:	SP mode: 1-5/16 i.p.s. (33.35mm/s) LP mode: 21/32 i.p.s. (16.67mm/s) SLP mode: 7/16 i.p.s. (11.12mm/s)	Weight:	5.7 lbs. (2.6kg)
Record/Playback Time:	8 HRS. with 160 min. type tape used in SLP mode	Dimensions:	8-7/16"(W) × 2-3/4"(D) × 10-3/8"(H) (215mm × 69.5mm × 263mm)
FF/REW Time:	Less than 6 min. with 120 min. type tape	Weight and dimensions shown are approximate. Specifications are subject to change without notice.	
Heads:	Video: 4 rotary heads Audio: 2 stationary heads Control: 1 stationary head Erase: 1 full track erase 1 audio track erase for audio dubbing		
Input Level:	Video: VIDEO IN Jack (RCA type) 1.0Vp-p, 75Ω unbalanced Audio: MIC IN Jack (Left, Right) -70dB, 4kΩ unbalanced

## IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

IMPORTANT SAFETY NOTICE:  
COMPONENTS IDENTIFIED BY THE SIGN ⚡ HAVE  
SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY.  
WHEN REPLACING ANY OF THESE COMPONENTS, USE  
ONLY THE SPECIFIED PARTS.

SPECIAL NOTE:  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTOR DEVICES ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE THE SPECIAL  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY SENSITIVE  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

VOLTAGE MEASUREMENT:

1. CUE, REVIEW, FRAME ADVANCE, SLOW,  
COLOR BAR SIGNAL IN SLP MODE.

2. OTHERS  
COLOR BAR SIGNAL IN SP MODE.

★ : UNMEASURABLE OR UNNECESSARY TO MEASURE

VOLTAGE MEASUREMENT:  
 COLOR BAR SIGNAL IN SP REC MODE WITH BRACKET.  
 COLOR BAR SIGNAL IN SP PLAY MODE WITHOUT BRACKET.

**SPECIAL NOTE:**  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTOR DEVICES ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE THE SPECIAL  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY SENSITIVE  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

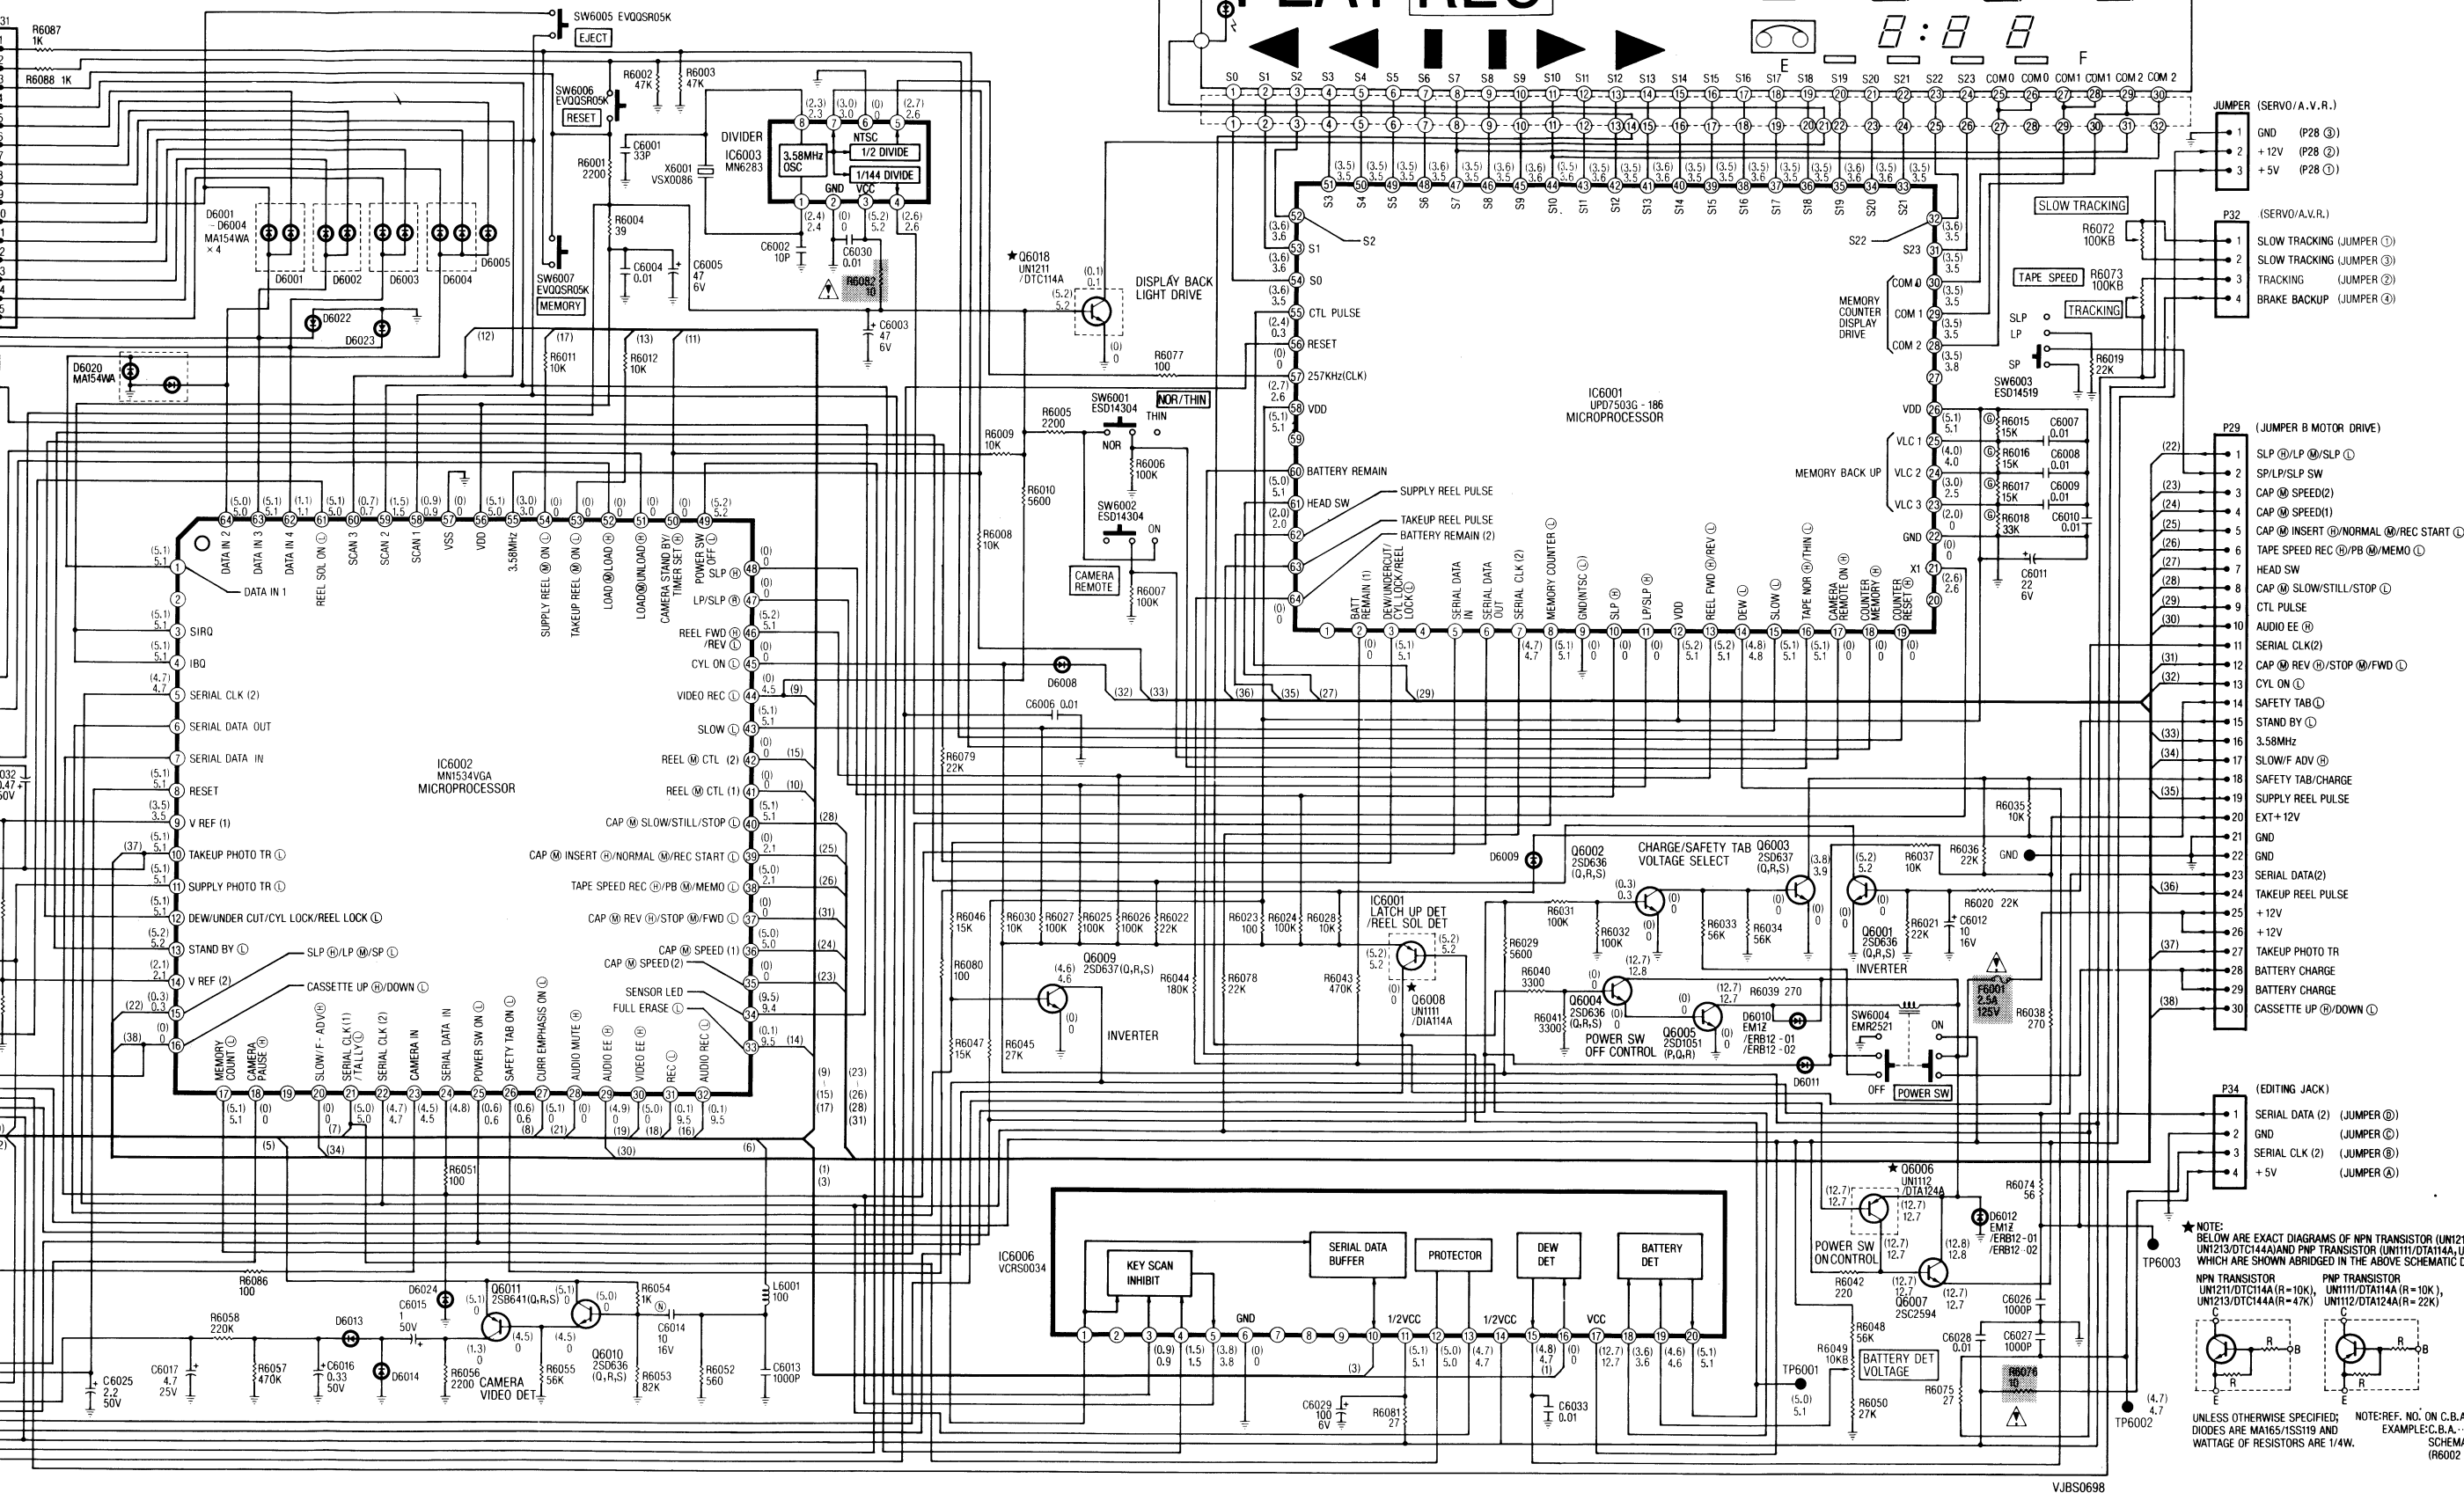

SAFETY NOTICE:  
IDENTIFIED BY THE SIGN HAVE  
CHARACTERISTICS IMPORTANT FOR SAFETY.  
ANY OF THESE COMPONENTS, USE  
SPECIFIED PARTS.

SPECIAL NOTE:  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTOR DEVICES ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE THE SPECIAL  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY SENSITIVE  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

## IMPORTANT SAFETY NOTICE

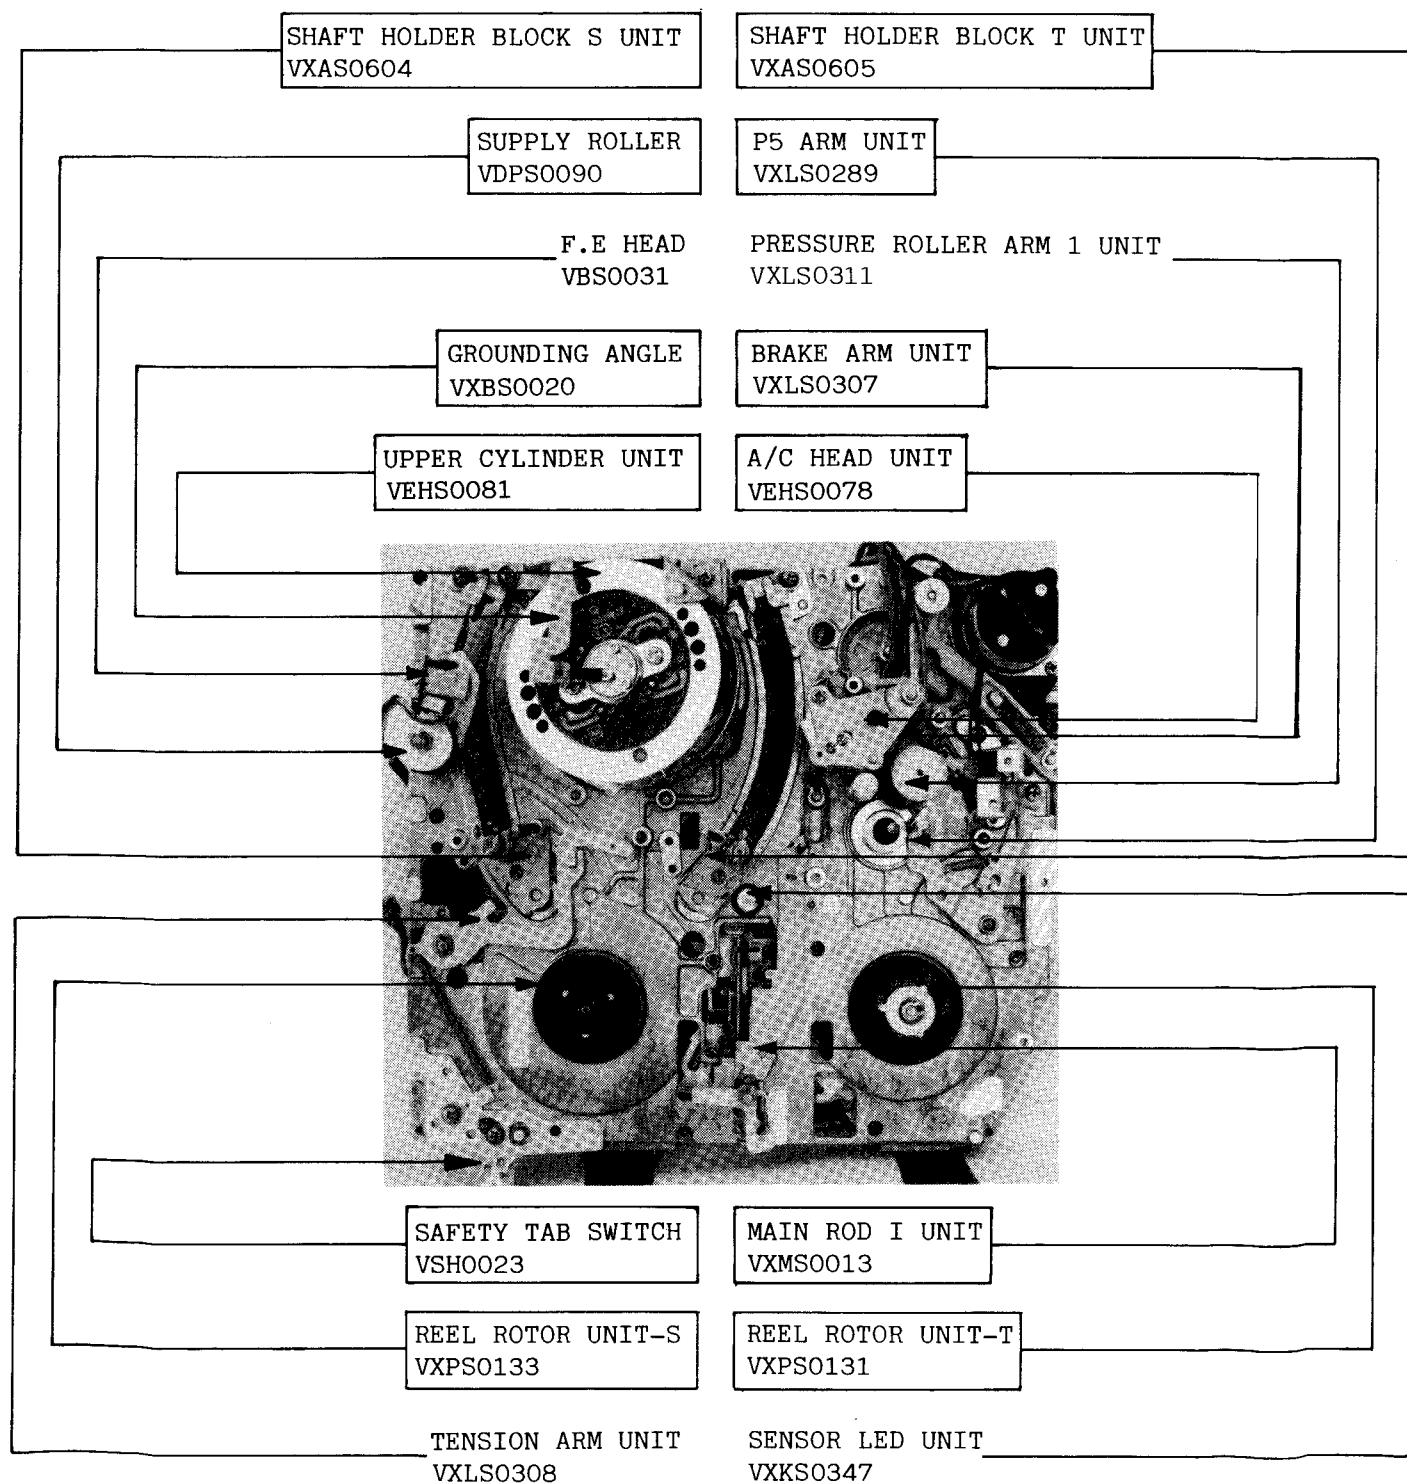

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

# INNER PARTS LOCATION

## TOP VIEW

### Note:

When the Mechanical parts surrounded by rectangle are removed or replaced, be sure to perform necessary adjustment or confirmation procedures according to the mechanical adjustment procedures section.

## BOTTOM VIEW

## LUBRICATION POINTS

When the marked parts are replaced, apply the recommended lubricants or adhesive for better maintenance of the unit.

Marks	Kind of Lubricant	Availability	Part Number
× × ×	Molytone Grease	Available From Factory	MOR265
○ ○ ○	Spindle Oil	Purchase From Local Supplier	.....
△ △ △	Gummed Adhesive	Purchase From Local Supplier	.....

# Service Manual

**VHS** Video Cassette Recorder  
**PV-8000**

**Supplementary**

## **Subject:** New Servo/A.V.R. Circuit

Since the Servo/A.V.R. C.B.A. has been redesigned, use this supplementary service manual when servicing the unit with new Servo/A.V.R. C.B.A.

Identification: A label with  on it is put on the rear side of decks with new C.B.A.

Introduction: New Servo/A.V.R. C.B.A. has been introduced from Serial No. I4SA56701 (Effective date Sept. 27, 1984) in common with old C.B.A.

### **NOTE:**

This supplementary service manual contains information about how the new Servo/A.V.R. C.B.A. differs from the original Servo/A.V.R. C.B.A. in service manual (model PV-8000/ORDER NO. VRD-8403-507). Please refer to original one for all information pertaining to the PV-8000 that is not covered in this supplementary service manual.

## IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

### NOTE:

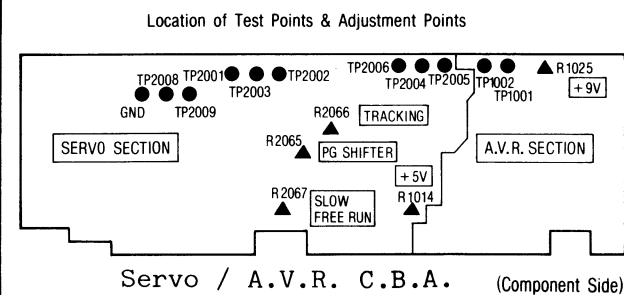

Fig. E1

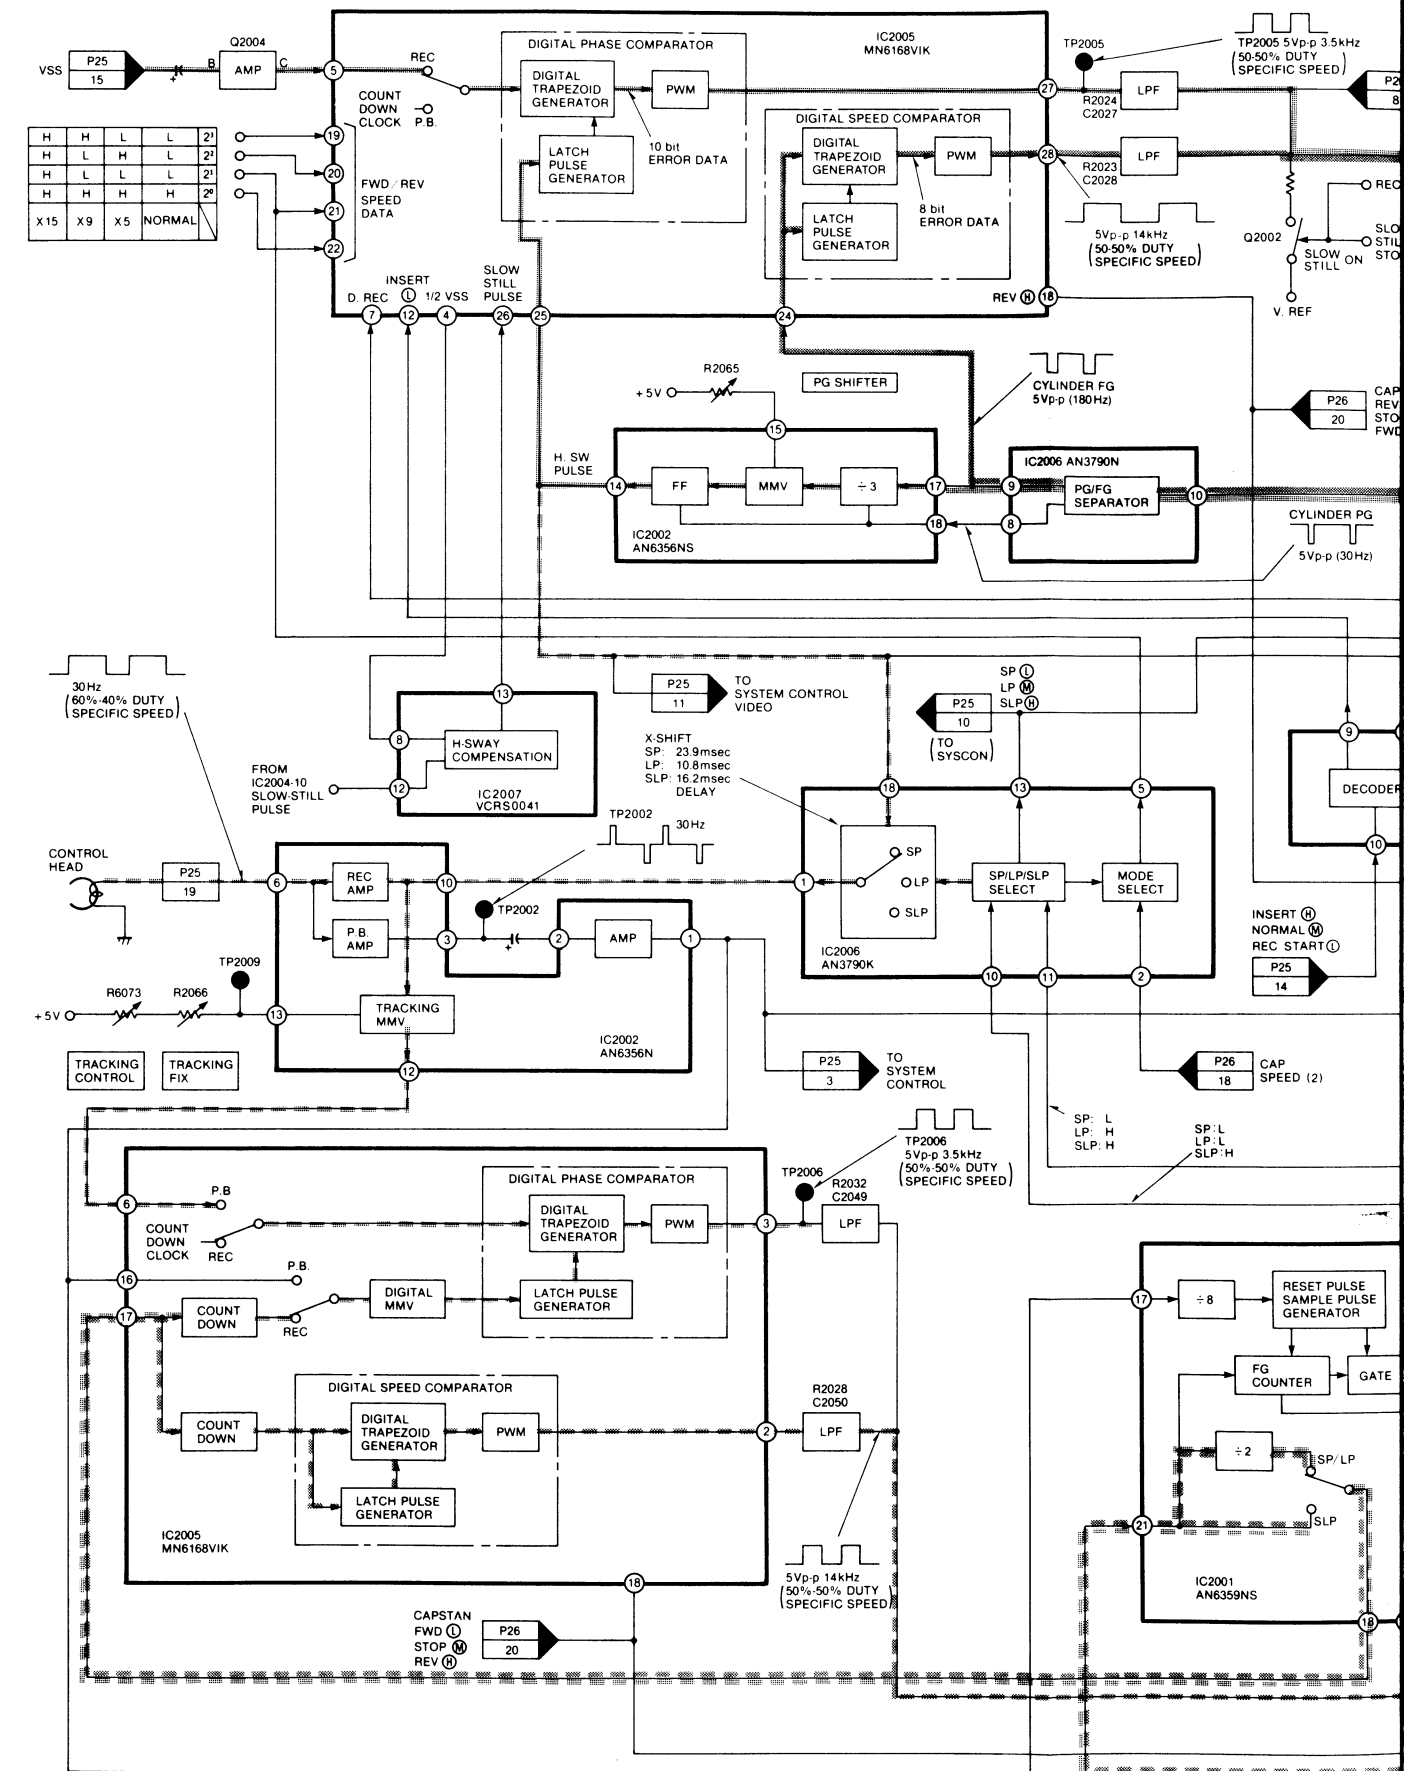

### 2-3-3. SLOW FREE RUN ADJUSTMENT

Test Point: TP2001

Adjustment: R2067 (SLOW-FR)

1. Connect the Deck and Tuner Unit with Multi-connector and supply a video signal on the right side panel or tune in a local on-air TV program.
2. Insert a cassette tape and make a recording in the SLP mode.
3. Connect the jumper from TP2003 to GND.
4. Connect the frequency counter to TP2001 on the Servo section.
5. Adjust the SLOW-FR (R2067) so that the frequency is 320 (+- 10)Hz.
6. Remove the frequency counter and jumper.

IN STOP MODE.

SERVO SECTION  
VOLTAGE MEASUREMENT:  
COLOR BAR SIGNAL IN SP REC MODE WITH BRACKET.  
COLOR BAR SIGNAL IN SP PLAY MODE WITHOUT BRACKET.

**IMPORTANT SAFETY NOTICE:**  
COMPONENTS IDENTIFIED BY THE SIGN  HAVE  
SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY.  
WHEN REPLACING ANY OF THESE COMPONENTS, USE  
ONLY THE SPECIFIED PARTS.

**SPECIAL NOTE:**  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTOR DEVICES ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE THE SPECIAL  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY SENSITIVE  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

NOTE: REF. NO. ON C.B.A. IS PRINTED AS FOLLOWS.

NPN TRANSISTORS ARE 2SD601,  
DIODES ARE MA221 AND  
WATTAGE OF RESISTORS ARE 1/16W

VJBS0245

ELECTRICAL REPLACEMENT PARTS LIST

Model No. PV-8000

Special Note  
All integrated circuits and many other semiconductor devices are electrostatically sensitive and therefore require the special handling techniques described under the "Electrostatically Sensitive (ES) Devices" section of this service manual.

Notes

1. Be sure to make your orders of replacement parts according to this list.

2. IMPORTANT SAFETY NOTICE

Components identified by the sign  have special characteristics important for safety. When replacing any of these components, Use only the specified parts.

3. Unless otherwise specified:

All resistors are in OHMS ( $\Omega$ ), 1/4W,  $\pm 5\%$ , carbon, K=1,000 $\Omega$ , M=1,000K $\Omega$ .

All capacitors are in MICROFARADS (UF), P=UUF,  $\pm 10\%$ .

All coils are in MICROHENRIES (UH), M=10<sup>3</sup>U,  $\pm 10\%$ .

4. C.B.A.: Circuit Board Assembly.

5. P.C.B.: Print Circuit Board.
